

UNIT-e Student Records Tracking Solution (SRTS) Light Directory Access Protocol (LDAP)

Providing single sign-in for staff and students with secure access to UNIT-e data.

What does LDAP do?

UNIT-e LDAP (Light Directory Access Protocol) integration provides a rapid method of generating student network accounts on Microsoft Active Directory servers. It provides staff with single sign-in access to UNIT-e either via the client or web based applications. Through LDAP filters, secure access to UNIT-e data can be provided to students facilitating the development of self service solutions for your learners.

Student LDAP account creation

During the enrolment process it is now possible to flag the student as requiring a LDAP network account. UNIT-e monitors these requests and using a dynamic ADO database connection to your LDAP server, will create network accounts based on the student personal information entered into UNIT-e.

Single Sign-in Staff Access

The product enables UNIT-e to authenticate staff against their LDAP network account. In effect this means once a member of staff has logged onto an institution's network they will not be requested to enter a username and password again before gaining access to data held within UNIT-e.

Secure Student Access to UNIT-e data

Though the creation of a UNIT-e filter that makes use of information held about the current network user, secure access to students personal data can be facilitated. Used in conjunction with UNIT-e Internet Builder tools this provides the opportunity to offer self-service solutions for your students.

Benefits

- **Rapid creation of student accounts**
By integrating network account creation with the enrolment process, the speed and accuracy of network account creation is improved.
- **Reduced barriers to information access**
Use of a common username and password reduces barriers to access to information for staff.
- **Improved self-service solution for your students**
Providing access to information held about them, LDAP access meets the needs of the Data Protection Act and Freedom of Information act and improves the quality of data you hold.
