

UNIT-e Student Records Tracking Solution (SRTS) Office Builder series

Bringing Management Information into the familiar Microsoft Office™ environment, UNIT-e Office Builder allows you to share data from UNIT-e with Microsoft™ applications.

UNIT-e Mail Merge Builder

Enables you to produce Microsoft Word™ mail-merged documents based on any address and personal data within the database; student, applications, enquirers, staff or external organisations. The mail merges can be used to send letters, emails or even mobile phone text messages.

UNIT-e Spreadsheet Builder

Enables you to extract data to Microsoft Excel™ and analyse it using the powerful Excel™ tools such as pivot tables. Use it to help you prepare governor reports, audits and inspections or just to help with the smooth running of administrative processes.

UNIT-e Report View Builder

Many colleges develop numerous stand alone systems for the access and retrieval of college data and these are often developed in Microsoft Access™. UNIT-e Report View Builder enables you to provide these systems with data directly from your main student record system and reduces the problems of multiple data systems.

Key Benefits

Simple

The use of industry standard techniques and uncomplicated syntax makes integration straightforward.

Secure

Because the integration is made to the UNIT-e business layer, all business rules and security are applied to the data being transferred.

Powerful

By interfacing in real-time at code level, a seamless and dynamic data flow can be achieved.

An open yet secure environment that enables you to integrate systems seamlessly.

the total education management solution
