

UNIT-e Online Services

UNIT-e Online Services is a powerful suite of applications that enables prospective students to search for courses, make enquiries, submit applications, enrol and make payments online with ease.

Online Enquiries

Using familiar search engine tools, visitors can search for courses on offer using keywords or via categories that can be defined by the institution. Once they find a course of interest they can access more details via links to online brochures. If the visitor wishes to progress with the enquiry, an online account can be created containing essential personal information.

Online Applications

Some visitors may wish to submit an application and the solution allows the institution to adopt a more controlled, formal workflow approach of checking entry requirements, arranging an interview and making an offer. The solution enables applicants to submit the information required for this back office business process and offers a mechanism for the institution to engage with the applicant and increase success of recruitment.

Online Enrolments

In an age of technological advancement, the expectation of students to be able to enrol online is extremely high. Online Enrolments offers this facility, including the option for institutions to implement our secure, online credit card payment service for payment of fees, reducing the risk of students enrolling with an alternative course provider. In addition, Online Enrolments enables students on modular programs to select their options and have them validated at the point of selection.

Flexible and tailorable

Online Services is built using the latest Microsoft .Net technologies. The 3-tier architecture and webservices approach makes it a very versatile solution that can be used straight out of the box, providing a rapid DDA compliant solution, alternatively it can be integrated into existing websites or broader self service implementations.

Fast, secure and accurate

As an internet deployed solution, UNIT-e Online Services has been designed with security in mind. Rigorous testing has been carried out to ensure that personal data and your student record system are safe. Load-testing has been undertaken using some of the most advanced tools in the industry to ensure that the solution is responsive and stable.

With the advantage of early data capture at the source, the need for re-keying information during enrolment is significantly reduced, shortening queues and improving data accuracy. Institutions can also identify early trends for course planning, enabling more efficient resource management that can lead to cost savings and improved income.

Benefits

- Improving the student experience through self service
- Accessibility to information and service anytime, anyplace, anywhere
- Immediate availability of data within the student record
- Reducing data entry for institution staff
- Increasing data accuracy by placing data capture close to the source
- Improving course planning
- Reducing bad debt through immediate online payment option
- Flexibility to integrate with wider institution web implementations
