

UNIT-e Tools for Visual Studio 2005

Create your own UNIT-e applications using leading tools.

UNIT-e Information Interface already provides market leading design functionality but what if you want to go that bit further and want to achieve something a bit different? UNIT-e Tools for Visual Studio comes as part of Information Interface Professional Edition and gives all the power, security and configurability of UNIT-e in a cutting edge design environment.

There may be times when you want to access UNIT-e via a website or from within an in-house application. Exposing UNIT-e business entities and processes to Visual Studio gives developers huge potential to create highly customised applications or develop brand new functionality. UNIT-e Information Interface design time tools such as the Data Manager Designer and Data Explorer are closely embedded into the Visual Studio 2005 IDE. Full intelligentsias supported and the online help that is included makes designing code easy.

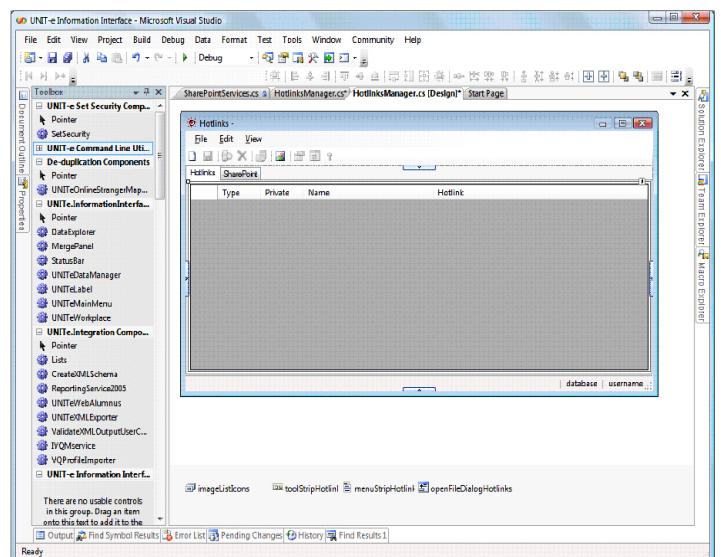

Your existing UNIT-e Information Interface applications can be exported to Visual Studio allowing you to get started quickly and the full UNIT-e Information Interface control set is included. Because UNIT-e Tools for Visual Studio is built on the same technology used by Capita's in-house developers you can be sure it's thoroughly tested and will be maintained as technology evolves.

Even UNIT-e toolsets such as XML Export and SharePoint are exposed* allowing you to add UNIT-e style functionality to your own applications, even when there is otherwise little or no relationship with UNIT-e.

UNIT-e Tools for Visual Studio builds on the extensive functionality in UNIT-e Information Interface to provide a very powerful tool for development professionals.

Benefits

- Built on tried and tested UNIT-e technology
