

UNIT-e and QAS Postcode

The powerful way to add postcode address entry to UNIT-e.

QAS enables addresses to be retrieved and stored by just entering the postcode. Integration in UNIT-e provides a seamless link to the QAS product. QAS Pro enables reverse look-ups enabling full address and postcode to be found from partial address entry.

Features

- Using Royal Mail PAF® data, QAS Postcode offers fast, flexible address capture
- QAS has been embedded into UNIT-e to ensure a seamless link between the products without the need to change the process workflow or working environment
- QAS is in use by over 7,500 customers worldwide, the QAS DataWorld provides the ability of using postal address files from 14 other countries

Key Benefits

- **Speed** - up to 80% savings on the number of keystrokes required
- **Validation** - the addition of 'names data' helps to verify and validate data
- **Accuracy** - monthly updates to the Royal Mail's Postcode Address File ensures that the most up-to-date address details are being used
- **Flexibility** - choice of address and name elements and choice over how they should be pasted
- **Customer relationship management** - capturing details quickly and efficiently enhances your professional image and ensures items are delivered correctly

QAS product range

In addition to QAS Pro, QAS offer a range of address solutions including;

- Batch clean - update old address data
- NameTracer - combining PAF and Electoral Roll data
- MailSort - add sort-codes and reduce postal charges
- Pro for the web - capture addresses from the web
- Geo-demographic data - integrates with Acorn and Mosaic profiling solutions
- Geographic data provision of grid-reference enables integration with GIS plotting solutions
- Additional datasets - local government, business and Electoral Roll data
